

## MWX-PP

The Lumewave MWX-PP Smart Power Pack allows for the Lumewave MWX- LVE-180U Microwave Sensor to be used in a stand-alone mode without the need to connect to a Lumewave Top900 series Wireless Outdoor Lighting Controller.

The use of the MWX-PP Smart Power Pack enables the user to configure fixture parameters that would normally be handled by a Lumewave controller.

Using the Bluetooth interface, in addition to all the standard sensitivity and motion settings of the MWX-LVE-180U Microwave Sensor, other lighting parameters such as the ability to set light levels (low and high) and the duration of high and low levels upon motion are configurable with the MWX-PP “Smart Power Pack”.

## MWX-PP Operating parameters

- Operating Voltage: 110 - 277Vac
- Power switching: 10A
- Dimming Signal: 0-10V (sink/source)
